

Requirements Specification Document

1. Project Summary

1.1 Project Overview

This E-Commerce Shopping Website is a web-based platform that allows users to browse, select, and purchase products online using any smart device such as a mobile phone, tablet, or computer. The system provides an easy and convenient shopping experience by allowing users to explore products, add them to a cart, and complete purchases securely.

The application reduces the need for physical shopping, saves time, and provides a centralized platform for managing products, orders, and users.

1.2 Project Scope

The web application provides a secure platform where users can register and log in using a username and password. Once logged in, users can browse products, add items to their cart, and place orders.

The system supports the following functionalities:

- User Registration and Login
- Product Browsing by Category
- Add to Cart and Remove from Cart
- Order Placement and Payment
- View Order History
- Search and Filter Products

Admin has full control over the system including managing products, users, and orders.

The application allows:

- Customers to shop online easily
- Admin to manage inventory and orders
- Secure handling of user data and transactions

2.0 Product Functions Overview

Types of users/actors

1. Admin
2. Customer (User)

Admin Features

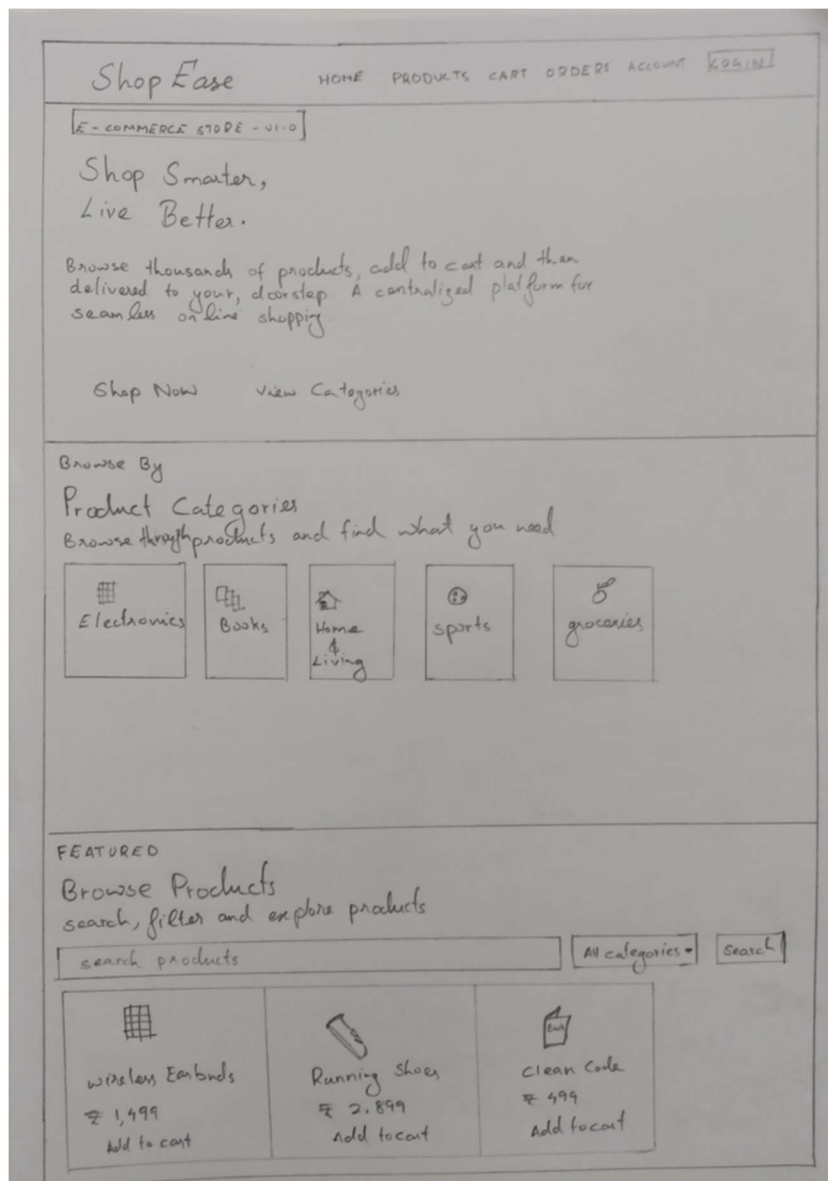

3. Add new products
4. Edit product details (price, description, stock)

5. Delete products
6. View all orders
7. Update order status (Shipped, Delivered)
